

Project: Professional Video Editing Platform

1. ONE-LINE CLAIM

| "Video editing for Ubuntu. No NVIDIA. No rebooting."

How I Got Here

I asked AI to generate ten options based on my proof statement, then picked and sharpened the best one. Here are the options I considered:

Option	Why It Didn't Make the Cut
"Professional video editing that actually runs on Ubuntu."	Too general—"professional" is vague.
"Edit video on Ubuntu without switching to Windows."	Describes the problem but lacks punch.
"The video editor Ubuntu users have been waiting for."	Sounds like marketing hype.
"No NVIDIA? No problem. Edit video in your browser."	Close, but "no problem" is slightly casual.
"Video editing for Ubuntu. No NVIDIA. No rebooting."	Selected. Sharp, specific, memorable.

Why this claim works:

- Single sentence** — not a paragraph.
- States what you prove** — you can build a video editor that works on Ubuntu without proprietary hardware.
- Memorable** — the repetition of "No" creates rhythm. It's easy to remember.

2. CONTENT MAP

Page	Sections (in order)	Case Study	Call to Action
Home	1. Hero: One-line claim + primary CTA 2. Problem statement (2 sentences) 3. Feature highlights (3 features as icons/cards) 4. Brief preview of the platform (screenshot) 5. "See it in action" link to Work	N/A	Primary: "Try the Demo" Secondary: "View Case Studies" (links to Work)
Work / Case Studies	1. Page title + brief intro 2. Lead Case: "Building a browser-based video editor for Ubuntu" (problem → what I did → outcome) 3. Supporting Case: "Making it fast: WebAssembly + IndexedDB" 4. Link back to Home	2 case studies	On each case: "View Live Demo" Page-level: "Try It Yourself" (links to Contact)
About	1. Brief bio (2 paragraphs) 2. Why I built this (personal story) 3. Tech stack + approach 4. Soft CTA to Contact	N/A	"Let's build something similar" (links to Contact)
Contact / Start	1. Simple headline 2. Brief form (name, email, message) 3. Direct link to live demo / trial 4. Footer with social links	N/A	Primary: "Send Message" Secondary: "Start Free Trial"

How This Ladders Up to the One Action

Page	Page-Level CTA	How It Leads to the One Action
Home	"Try the Demo"	Directs visitors to experience the platform immediately—the fastest path to conversion.
Work	"View Live Demo" (on cases)	Demonstrates proof through real work, then funnels to the demo.
About	"Let's build something	Builds trust, then invites contact.

Page	Page-Level CTA	How It Leads to the One Action
	similar"	
Contact	"Send Message"	The final conversion point—the one action from Week 1.
The one action (from Week 1): "Start a free trial of the accessible video editing platform I built." — Every CTA on every page ultimately points toward this goal.		

3. STILL NEED TO GATHER

This is my honest list of what I still need to collect or create before the build week. Being upfront about gaps prevents blockers later.

Immediate Needs (Blockers if missing)

- ☐ **Live demo URL** — The platform needs to be deployed somewhere accessible (Vercel, Netlify, or a custom domain).
- ☐ **Screenshots of the editor in action** — Clean, cropped shots of:
 - The timeline view
 - The export dialog
 - The import flow
- ☐ **Screen recording** — A 30-second screen recording of the editing flow (trim, cut, export).

Nice-to-Haves (Can add later)

- ☐ **Performance metrics** — Export time comparison (this platform vs. DaVinci Resolve on the same machine).
- ☐ **Before/after numbers** — Time saved per editing session (e.g., "Saved 20 minutes per edit by eliminating reboots").
- ☐ **Testimonial** — From a beta user who has tried the platform on Ubuntu.
- ☐ **Code repository** — The GitHub repo with a clean README (already exists, but needs documenting).

Internship Work (In progress)

- ☐ **Case study write-up** — The full case study will be completed in Week 2 (Frame It as Cases). I'll pull it into the Work page once it's done.
- ☐ **Final visual assets** — The identity kit from this week will inform the design; I need to apply it consistently across all pages.
